Rossmoyne Senior High School

Semester One Examination, 2021

Question/Answer booklet

MATHEMATICS METHODS UNIT 1

Section One: Calculator-free

SOLUTIONS

WA student number: In figures

In words

Your name

Number of additional answer booklets used (if applicable):

Time allowed for this section

Reading time before commencing work:	five minutes
Working time:	fifty minutes

Materials required/recommended for this section

To be provided by the supervisor

This Question/Answer booklet
Formula sheet

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

Special items: nil

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	54	35
Section Two: Calculator-assumed	13	13	100	95	65
				Total	100

Instructions to candidates

1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.

2. Write your answers in this Question/Answer booklet preferably using a blue/black pen. Do not use erasable or gel pens.

3. You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.

4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.

5. It is recommended that you do not use pencil, except in diagrams.

6. Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.

7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Section One: Calculator-free **35% (54 Marks)**

This section has **eight** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time: 50 minutes.

Question 1 **(6 marks)**

Solve the following equations for x.

(a) $(2x+5)(x-4)=0$. (2 marks)

Solution
$2x+5=0 \Rightarrow x=-\frac{5}{2}=-2.5$ $x-4=0 \Rightarrow x=4$ $x=-2.5, \quad x=4$
Specific behaviours
✓ first correct solution   ✓ second correct solution

(b) $\frac{8x+3}{2}=\frac{9x-8}{4}$ (2 marks)

Solution
$4(8x+3)=2(9x-8)$ $16x+6=9x-8$ $7x=-14$ $x=-2$
Specific behaviours
✓ indicates correct method   ✓ correct solution

(c) $(x-8)^2-100=0$. (2 marks)

Solution
$(x-8)^2=10^2$ $x-8=\pm 10$ $x=18, \quad x=-2$
Specific behaviours
✓ indicates correct method   ✓ both correct solutions

Alternative Solution
$(x-8)(x-8)-100=0$ $x^2-16x-36=0$ $(x-18)(x+2)=0$ $x=18,-2$
Specific behaviours
✓ indicates correct method   ✓ both correct solutions

Question 2 **(7 marks)**

The straight line L has equation $4x + 2y = 1$.

(a) Write the equation of L in the form $y = mx + c$ to show that its gradient is -2. (1 mark)

Solution
$2y = -4x + 1 \Rightarrow y = -2x + \frac{1}{2} \Rightarrow m = -2$
Specific behaviours
✓ correct values of m and c

Line L_1 is perpendicular to L and passes through the point $(2, 6)$.

Line L_2 is parallel to L and passes through the point $(1, -7)$.

(b) Determine the point of intersection of L_1 and L_2. (6 marks)

Solution
$L_1: (y - 6) = \frac{1}{2}(x - 2) \Rightarrow y = \frac{1}{2}x + 5$ $L_2: (y - 1) = -2(x - -7) \Rightarrow y = -2x - 5$ $\frac{1}{2}x + 5 = -2x - 5$ $\left(\frac{1}{2} + 2\right)x = -10$ $\frac{5}{2}x = -10$ $x = -4$ $y = \frac{1}{2}(-4) + 5 = 3$ Lines intersect at $(-4, 3)$.
Specific behaviours
✓ gradient of L_1 ✓ equation of L_1 ✓ equation of L_2 ✓ equates lines and groups like terms ✓ solves for x ✓ solves for y and states point of intersection

Question 3 **(9 marks)**

The graphs of $f(x) = -3\sin\left(\frac{x}{2}\right)$ and $g(x) = 2\cos(x - 60°)$ are shown below on the interval $-180° \le x \le 180°$. $T(p, q)$ is a turning point of $g(x)$ with $p < 0$.

(a) State the period of $f(x)$. (1 mark)

Solution
$720°$
Specific behaviours
✓ correct value for the period

(b) State the range of $g(x)$. (1 mark)

Solution
$\{y : -2 \le x \le 2, y \in \mathbb{R}\}$
Specific behaviours
✓ correct max/min values and inequalities NB: Set notation not required

(c) Determine the values of *p* and *q*. (2 marks)

Solution
$g(x)$ has been translated $60°$ right therefore $p = -180° + 60° = -120°$ $g(x)$ has been vertically dilated by SF2 therefore $q = -2$
Specific behaviours
✓ correct value of p ✓ correct value of q

(d) Determine the value(s) of *x* in the interval $-180° \le x \le 180°$ for which $g(x) > 0$. (2 marks)

Solution
$-30° < x < 150°$
Specific behaviours
✓ correct upper and lower bounds ✓ correct inequalities

(e) State the transformations on $f(x)$ to obtain the function $h(x) = \sin(x)$. (3 marks)

Solution
Reflection over the x-axis. Vertical dilation of SF $\frac{1}{3}$. Horizontal dilation of SF $\frac{1}{2}$.
Specific behaviours
✓ correct reflection ✓ vertical dilation with correct SF ✓ horizontal dilation with correct SF NB: Accept any order

Question 4 **(7 marks)**

Consider the function $f(x) = \dfrac{a}{x+b}$, where a and b are constants. The graph of $y = f(x)$ has an asymptote with equation $x = -1$ and passes through the point $(-4, 1)$.

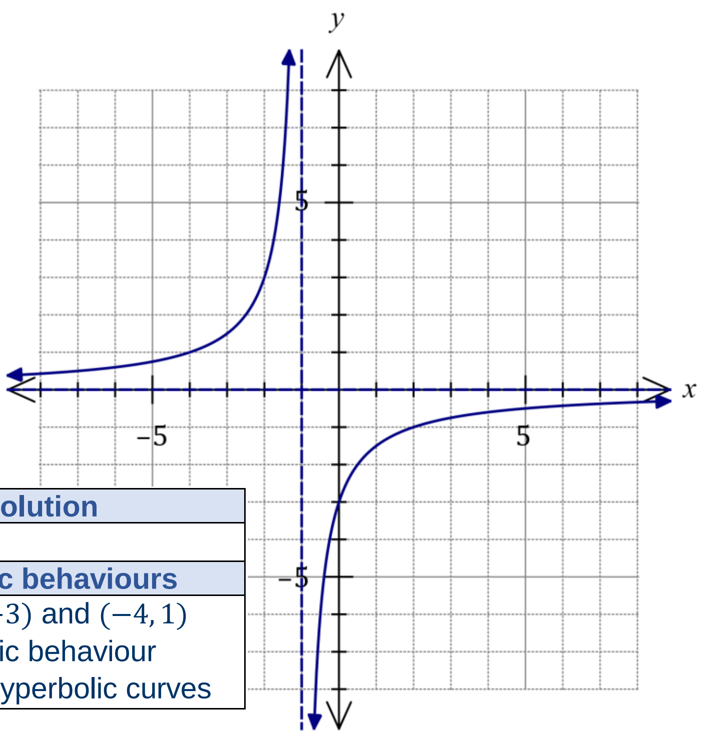
(a) Determine the value of a and the value of b. (3 marks)

Solution
Using asymptote, $-1 + b = 0 \Rightarrow b = 1$. Using point: $1 = \dfrac{a}{-4+1}$ $a = -3$
Specific behaviours
✓ value of b ✓ forms equation using point ✓ calculates value of a

(b) State the equation of the other asymptote of the graph of $y = f(x)$. (1 mark)

Solution
$y = 0$
Specific behaviours
✓ correct equation

(c) Sketch the graph of $y = f(x)$ on the axes below. (3 marks)



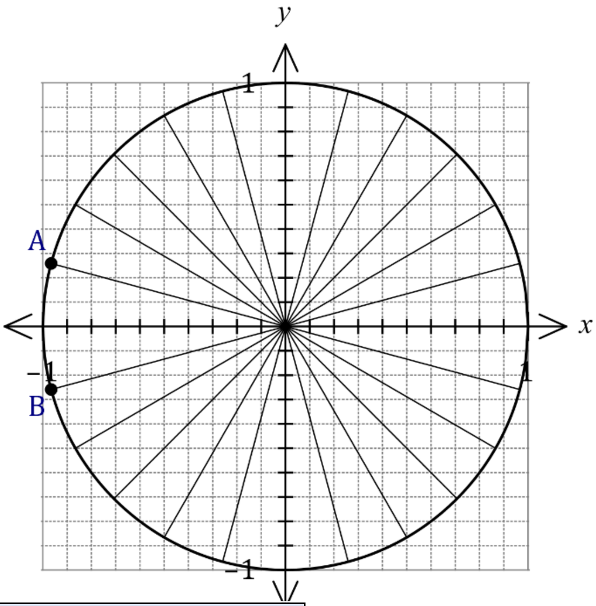
Solution
See graph
Specific behaviours
✓ thru' $(0, -3)$ and $(-4, 1)$ ✓ asymptotic behaviour ✓ smooth hyperbolic curves

Question 5 **(6 marks)**

(a) A unit circle is shown.

Mark on the circumference of the circle the points A and B so that rays drawn from the origin to each point make anti-clockwise angles of $165°$ and $\frac{13\pi}{12}$ from the positive x-axis respectively.

Hence estimate the value of $\cos 165°$ and the value of $\sin\left(\frac{13\pi}{12}\right)$.



(3 marks)

Solution
See graph for points. $\cos 165° = x, \text{ where } -0.98 \le x \le 0.95$ $\sin\left(\frac{13\pi}{12}\right) = y, -0.28 \le y \le -0.24$
Specific behaviours
✓ both points located correctly   ✓ value of cosine within range   ✓ value of sine within range

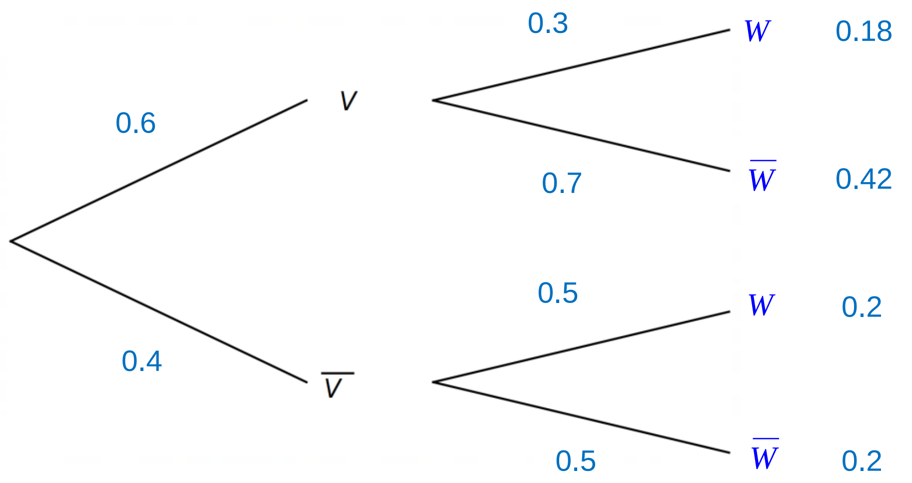
(b) Solve the equation $3\tan(2x - 10°) = \sqrt{3}$ for $0° \le x \le 180°$. (3 marks)

Solution
$\tan(2x - 10°) = \frac{\sqrt{3}}{3} = \frac{1}{\sqrt{3}}$ $2x - 10° = 30°, 210°$ $2x = 40°, 220°$ $x = 20°, 110°$
Specific behaviours
✓ eliminates tan from equation   ✓ one correct solution   ✓ second correct solution

Question 6 **(6 marks)**

The following probabilities are given for events *V* and *W*.

- $P(V) = 0.6$
- $P(W|V) = 0.3$
- $P(W|\overline{V}) = 0.5$



(a) Complete the tree diagram above. (2 marks)

Solution
See tree diagram above.
Specific behaviours
✓ probabilities on first branch correct
✓ probabilities on second branch correct

(b) Determine the following:

(i) $P(W)$ (1 mark)

Solution
$P(W) = 0.18 + 0.2 = 0.38$
Specific behaviours
✓ correct probability

(ii) $P(V \cap W)$ (1 mark)

Solution
$P(V \cap W) = 0.18$
Specific behaviours
✓ correct probability

(iii) $P(\overline{V} \cap W)$ (1 mark)

Solution
$P(\overline{V} \cap W) = 0.2$
Specific behaviours
✓ correct probability

(iv) $P(V \cup W)$ (1 mark)

Solution
$P(V \cup W) = 0.18 + 0.42 + 0.2 = 0.8$
Specific behaviours
✓ correct probability

Question 7 **(6 marks)**

Two polynomial functions are defined by $f(x) = (2x-3)(x+2)$ and $g(x) = x^3 + 4x^2 - 4x - 12$.

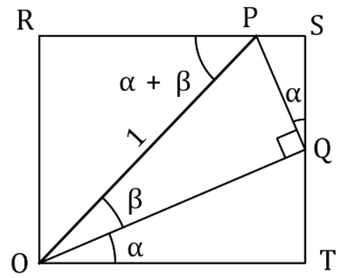
There is a point of intersection of $f(x)$ and $g(x)$ at $(2,4)$. Find the coordinates of the other point(s) of intersection.

Solution
Expand $f(x)$ $f(x) = (2x-3)(x+2)$ $= 2x^2 + x - 6$ Equate functions: $x^3 + 4x^2 - 4x - 12 = 2x^2 + x - 6$ Equate to zero: $x^3 + 2x^2 - 5x - 6 = 0$ Find root: From given point of intersection $x = 2$ Start factorising: $x^3 + 2x^2 - 5x - 6 = (x-2)(x^2 + 4x + 3)$ Complete factorising: $x^3 + 2x^2 - 5x - 6 = (x-2)(x+3)(x+1)$ Coordinates: $f(-1) = (-5)(1) = -5$ $f(-3) = (-9)(-1) = 9$ $f(2) = (1)(4) = 4$ Intersect at $(-1,-5)$ and $(-3,9)$.
Specific behaviours
✓ expands quadratic ✓ equate functions and then to zero ✓ recognises first root from given point ✓ factors into linear and quadratic ✓ completes factorisation ✓ determines y-coordinates and states coordinates of both points

Question 8 **(7 marks)**

Consider rectangle $ORST$ that contains the right triangle OPQ as shown.

Let the length of $OP = 1$,
$\angle QOT = \angle SQP = \alpha$,
$\angle POQ = \beta$ and
$\angle OPR = \alpha + \beta$.



(a) Explain why $QT = \sin\alpha\cos\beta$. (2 marks)

Solution
In triangle OPQ, $OQ = \cos\beta$. Hence, in triangle OQT, $QT = OQ\sin\alpha = \cos\beta\sin\alpha$.
Specific behaviours
✓ uses ΔOPQ for length of OQ ✓ uses ΔOQT to obtain result

(b) Determine expressions for the lengths of QS and OR and hence prove the angle sum identity $\sin(\alpha + \beta) = \sin\alpha\cos\beta + \cos\alpha\sin\beta$. (3 marks)

Solution
$QS = PQ\cos\alpha$ $= \sin\beta\cos\alpha$ $OR = \sin(\alpha + \beta)$ Because $ORST$ is a rectangle then $OR = SQ + QT$ $\sin(\alpha + \beta) = \sin\beta\cos\alpha + \cos\beta\sin\alpha$
Specific behaviours
✓ length of QS ✓ length of OR ✓ uses congruent sides of rectangle to complete proof

(c) Use the identity from part (b) to show that $\sin\left(x + \frac{3\pi}{2}\right) = -\cos x$. (2 marks)

Solution
$\sin\left(x + \frac{3\pi}{2}\right) = \sin x\cos\frac{3\pi}{2} + \cos x\sin\frac{3\pi}{2}$ $= \sin x \times 0 + \cos x \times -1$ $= -\cos x$
Specific behaviours
✓ expands using identity ✓ clearly shows both known values and simplifies
